Weekly Coal Production

Energy Information Administration

The Weekly Coal Production (WCP) provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. The Coal Exports and Imports Supplement contains annual as well as detailed monthly data on U.S. coal and coke exports and imports. This week's supplement contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price).

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of

1974 (P.L. 93-275) as amended. Weekly Coal Production is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly Coal Distribution Report, the Quarterly Coal Report, Coal Production 1987, and Coal Data: A Reference.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).

Summary

U.S. coal production in the week ended November 4, 1989, as estimated by the Energy Information Administration, totaled 21 million short tons, approximately the same as production in the previous week. Production East of the Mississippi totaled 13 million short tons, and production West of the Mississippi totaled 8 million short tons.

Coal production in October totaled 88 million short tons, 6 percent more than the 83 million short tons produced in September 1989 and 8 percent higher than production in October 1988.

Coal consumption at electric utility plants in August 1989 totaled 70 million short tons. This was nearly 1 million short tons higher than in July, but 5 million

short tons lower than in August last year. From January through August 1989, utility coal consumption was 509 million short tons, a slight decrease from that in the same period of 1988.

Utility coal stocks on August 31, 1989, totaled 134 million short tons. The stockpile level was about 1 percent lower than at the end of July and 5 percent less than at the end of August 1988.

The average price of coal receipts at electric utilities decreased to \$29.27 per short ton in July 1989 from \$30.25 per short ton in June. In the first 7 months of 1989, the price averaged \$30.09 per short ton, which was 3 percent less than in the comparable period of 1988.

^(*) For detailed data, the absolute value of the number is less than 0.5 thousand short tons. For percentage calculations the absolute value of the number is less than 0.05 percent.

Note: Total may not equal sum of components because of independent rounding.

Source: Energy Information Administration, Form EIA-759, "Monthly Power Plant Report."
